Hi Peter,

Thought I would put in writing how delighted I am in your product. We have a large concrete pool, that for many years ran a DE earth filter. While the pool was always very clean the maintenance was very high. Approximately 6 years ago we converted to a sand filter. While the maintenance was very low the water had lost its shine and I found that I had to continually use more algaecide to keep clean.

Late 2009 I change the pool filter media to Zelbrite. To my very pleasant surprise within 2 days the water was not only clean but more importantly has regained its shine. Even under the varying weather conditions of the 2010 summer I have found it much easier to manage the pool and using far less chemicals.

I would thoroughly recommend that anyone who has a pool large or small using a sand filter should change their filter media to Zelbrite for better filtration and a big saving in water as I have noticed I now only have to backwash every 10 weeks instead of 3 to 4 weeks when I was using sand.

Regards

Joe Papadatos
